

# Aqua Omnicide™

## For Complete Aquatic Biosecurity

Aqua Omnicide™ is a broad spectrum aquatic health disinfectant with proven activity against bacteria, viruses and fungi. It contains a synergistic blend of glutaraldehyde and coco benzyl dimethyl ammonium chloride.

The world's demands for high quality aquaculture products make control of diseases increasingly important. Good Biosecurity measures are vital to maintaining healthy animals, to reducing the risk of acquiring diseases in aquaculture facilities and to harvest high quality good yield.

Aqua Omnicide™ is specifically formulated to be used in intensive aquaculture environments. It can be used in shrimp and catfish grow out ponds, and in sea and river salmon and tilapia fish farms.

Aqua Omnicide™ is the ideal disinfectant for daily biosecurity programmes on all fish and shrimp farms.

- **Broad spectrum activity**
- **Proven residual activity**
- **Active in the presence of Organic matter**
- **Eradicates, viruses, bacteria, fungi and moulds**
- **Non corrosive in dilution**
- **Non-tainting**
- **Independently tested**
- **Biodegradable**

Aqua Omnicide™ is used in all areas of aquatic production including:-

**All equipment, nets, foot baths and wheel dips, pond cleaning and disinfection, well boats cleaning and sanitation.**

Aqua Omnicide™ has passed EN testing and also independently tested by :-

Norwegian Veterinary Institute – Oslo, Norway  
Dept. of Aquatic Biology and pathology. The  
College of Agriculture and Fisheries, Can Tho  
University, Vietnam

## For Complete Aquatic Biosecurity

### RECOMMENDED DILUTIONS

APPLICATION	DILUTION	COMMENTS
Foot bath/wheel dips	1:100	Change every 3 days
Equipment	1:150	Rinse with potable water
Walk ways	1:500 – 1:50	For concrete and earth floors
Vehicle sprays	1:150	Ensure even coverage
Well boats	1:100	Rinse with potable water
Misting buildings cold fogging	1:9	Leave for 20 mins before entry
Misting buildings thermal fogging	1:4	Leave for 20 mins before entry
Nets	1:100	Soak for 20 mins and rinse

### POND PREPARATION AND MANAGEMENT

- Fully drain ponds and remove all organic matter and dispose of away from farm. Allow pond to dry.
- Spray Aqua Omnicide™ over all surfaces. (before the addition of lime)
- Earth ponds dilute at 1-10 to 1-100 depending on level of soiling.
- Plastic lined ponds dilute Aqua Omnicide™ at 1:100.

### FOR DISEASE PREVENTION IN SHRIMP GROW OUT PONDS:-

Before stocking add 0.5 to 0.8 litres of Aqua Omnicide™ per 1,000m<sup>3</sup> of pond water

During raising period add 0.4 to 0.6 litres of Aqua Omnicide™ per 1,000m<sup>3</sup> of pond water. Repeat every 14 days

**AT OUTBREAK OF ANY VIRAL OR BACTERIAL DISEASE TO SUPPRESS INFECTION** 1.5 – 2.5 litres Aqua Omnicide™ / 1000 m<sup>3</sup> pond water

**FOR ZOOTHAMNIUM CONTROL TO SUPPRESS INFECTION** 1.0 – 1.25 litres Aqua Omnicide™ / 1000 m<sup>3</sup> pond water, repeat after 14 days if reinfection occurs

In all pond applications, dilute with water before application to aid even dispersion. Apply near to aeration paddles.
